

# Anti-vibration Cylinders

male:male

## Anti-Vibration

**61040**

### Material

Rubber on silver zinc plated steel (rubber hardness - 55 Shore A).

### Technical Notes

Parts with small diameters ( $d_1$ ) and relatively long length ( $h$ ) cannot accept radial loads (as shown in table).

Different thread sizes on request.

For rubber mounted on stainless steel - see part no. 61042.

### Tips

These cylinders are used to reduce vibration by allowing some movement (in axial

and radial as shown).

Typically used in machinery, compressors, air conditioning units, light engineering equipment etc.

Order No.	$d_1$	$h_1$	$d_2$	$l_1$	Axial load kgf max.	Radial load kgf max.

The cylindrical mounts are never to be used in tension. They should only be used in axial or radial. However radial loads are also considerably a lot less than axial loads. Parts with small diameters ( $d_1$ ) and relatively long lengths ( $h$ ) cannot accept radial loads.

**Correct Installation**

Axial

Radial - Axial

Radial

**Incorrect Installation**

Tensile direction

**Correct Installation**

Even load

Hang in axial direction

Fixed surface	* The height of the insulator may vary as the GEL is compressed under load.
Application	* Do not remove the GEL burr around the edge of the metal, this could cause detachment of GEL from the metal studs.
